This macro allows you to edit your sound effects in various ways. First of all, it allows you to open the waveform of the sound effect and position the cursor on any point you like. Then you can define two parameters that will be the major or minor axis of the axis of the ellipse you draw. If you then move the cursor anywhere in the ellipse, you will hear your sound. You can edit several parameters at once. For example, if you want to raise the volume, you just have to make sure that you set the positive value of the major axis.

Parametric Equalizer Pro [32/64bit]

Equalizers are a very useful tool for correcting the sound of an audio source. You can use them for improving the audio quality of your media, or to just make your source sound the way it was meant to. Equalizers allow you to boost or cut the volume of certain frequency bands, or even set them all to the same volume.

Parametric Equalizer Pro provides a complete set of tools that make its users able to correct audio tracks, to improve the audio quality. It includes equalizers (peak and notch), automixers and compressors, noise gates, amplitude envelopes, a delay/echo machine, and a noise reduction plugin. The ability to process multiple tracks

simultaneously is also included. All this in a simple and intuitive user interface.
