How to Cleanup Junk Files in Windows 10: Windows 10 is the most-used operating system in the world, according to NetMarketShare, and for good reason. The OS is designed to handle everyday tasks like browsing the web, emailing and chatting, and it does that well. However, all that computer power comes with a price: if your computer is getting slower and slower, it may be because of a hoard of unused junk files and other nasties lying on your hard drive. Here's how to clean them out. How to Cleanup Junk Files in Windows 10 – Disk Cleanup Windows 10 comes with Disk Cleanup, which offers a user-friendly interface for cleaning out unused files. It's not the most robust solution for cleaning up a full disk, but it can definitely help a lot if you're looking for a quick and easy way to tidy up your system's hard drive. Follow the steps below to access Disk Cleanup: Click on the Start button, type in "Disk Cleanup" and press Enter. Click on the "More tools" button, which will bring up the Disk Cleanup window. Click on the "Clean up system files" tab, and then click on "OK." Windows 10 also comes with a Windows Defender tool that keeps an eye on your PC, hunting down all sorts of nasties on your hard drive. You can use it to look for outdated security software, remove malware and also clean out older programs that you no longer need. We have already discussed Disk Cleanup in this guide, so we won't be going over that in detail here. It's worth mentioning, however, that Windows Defender is not a disk cleanup tool – it's a full security suite designed to make your computer less vulnerable to viruses and other malware. What is this? 29 Jun 2018 When you notice your speed of your web connection is no longer what it used to be, you do not need to start looking to upgrade your hardware right away. Instead, you can try a dedicated utility, such as NetOptimizer. This application comes with a user-friendly graphic user interface (GUI) that makes it easy for everyone to understand its features. It also displays a flurry of details about the computer it is running on, such as the OS version, make and model of the processor, amount of RAM, computer name and IP. Packs multiple optimization modes First off, those with little PC skills can go for the Auto Mode as this scans several parameters of your PC, such as Internet connection speed, I/O latency, data caching, network performance, throughput and efficiency. Once this analysis is complete, it automatically improves their performance, without any input from the user. Alternatively, you can choose to discard the recommended settings and manually configure them via the Advanced Mode. More advanced users can go ahead and modify only the parameters they deem the 77a5ca646e
